

ATEK s.r.o. policy on natural resource sustainability

Atek s.r.o is committed to supporting long-term sustainability in the management of natural resources. Environmental care and support of the broader agenda of sustainability of natural resources are an integral part of the professional activities of ATEK s.r.o. and the management of the organization. Our goal is to monitor and promote the correct implementation of the sustainability of natural resources, to reduce the environmental impact of all our activities, and to help our suppliers and customers promote identical principles towards the protection and efficient use of natural resources and their long-term sustainability.

Our natural resource sustainability policy is based on the following principles:

- Comply with and implement all relevant legislative requirements, regulations, and codes in all activities.
- Take into account aspects of sustainable management of natural resources in all our business decisions.
- Ensure that all employees are fully aware of our sustainability policy and committed to implementing and improving it.
- Minimize the impact of all production, administrative, and logistical activities with regard to the long-term sustainability of natural resources in order to achieve positive trends in waste reduction and reduction of electricity consumption.
- Pass on information to our customers and suppliers about our sustainability policy and encourage them to adopt identical natural resource sustainability management practices.
- Review, report annually, and continually strive to improve the sustainable management of natural resources.
- Long-term sustainable management of chemicals is a natural part of ATEK s.r.o., which perceives its great responsibility for the environment and for people.
- Water is a vital common resource for us and those around us. We take into account sustainable access to water as a key natural resource, access to water resources and sanitation, and sound management of freshwater.
- Water is a vital common resource for us and those around us. We take into account sustainable access to water as a key natural resource, access to water resources and sanitation, and the sound management of freshwater ecosystems are essential for human health, environmental sustainability, and economic prosperity. Regular monitoring is the basis for efficient use of water resources and reduces waste in our society.
- ATEK complies with NOx and CO emission limits. Regular monitoring and monitoring of emissions developments are essential to combat pollution and are a permanent part of the solution for improving and sustainability of air quality.
